

Borealis Haskap

Borealis Haskap is a popular variety of the hardy haskap shrub that produces delicious blue fruit. Haskaps, or honeyberries as they are sometimes called, are excellent for fresh eating and cooking. Borealis is a popular variety of haskap because of its large sweet berries.

It's a very cold hardy, fast-growing shrub that begins producing an abundance of fruit in as few as three years. Borealis, like the Tundra Haskap, does not self-pollinate well. We recommend a 'pollinator' variety, such as Aurora, Honeybee or Berry Blue Honeyberry, be planted at a suitable ratio and proximity to boost fruit production.

When purchasing a Borealis Haskap please also be sure to purchase a Aurora Haskap for successful pollination and yield.

QUICK FACTS

Height: 1.5 m (5 ft)

Spread: 1.5 m (5 ft)

Moisture: normal

Light: partial shade, full sun

Berries: berries are large; berries are similar to blueberries but larger and have a taste between raspberry and blueberry; ready for harvest at the end of June

Growth rate: medium

Life span: short

Suckering: none
